

# Smart Parking Management System

Real-time occupancy • Online bookings • Reduced congestion

# Customer Experience — Mobile Front End

## Find & Reserve

Map view • Real-time availability • Instant booking

## Check-in / Check-out

QR access • Automated time logs

## Dashboard

Booking history • Payment receipts • Vehicle profiles

# Admin Portal — Operations

## Slot Management

View / Reserve /  
Release slots

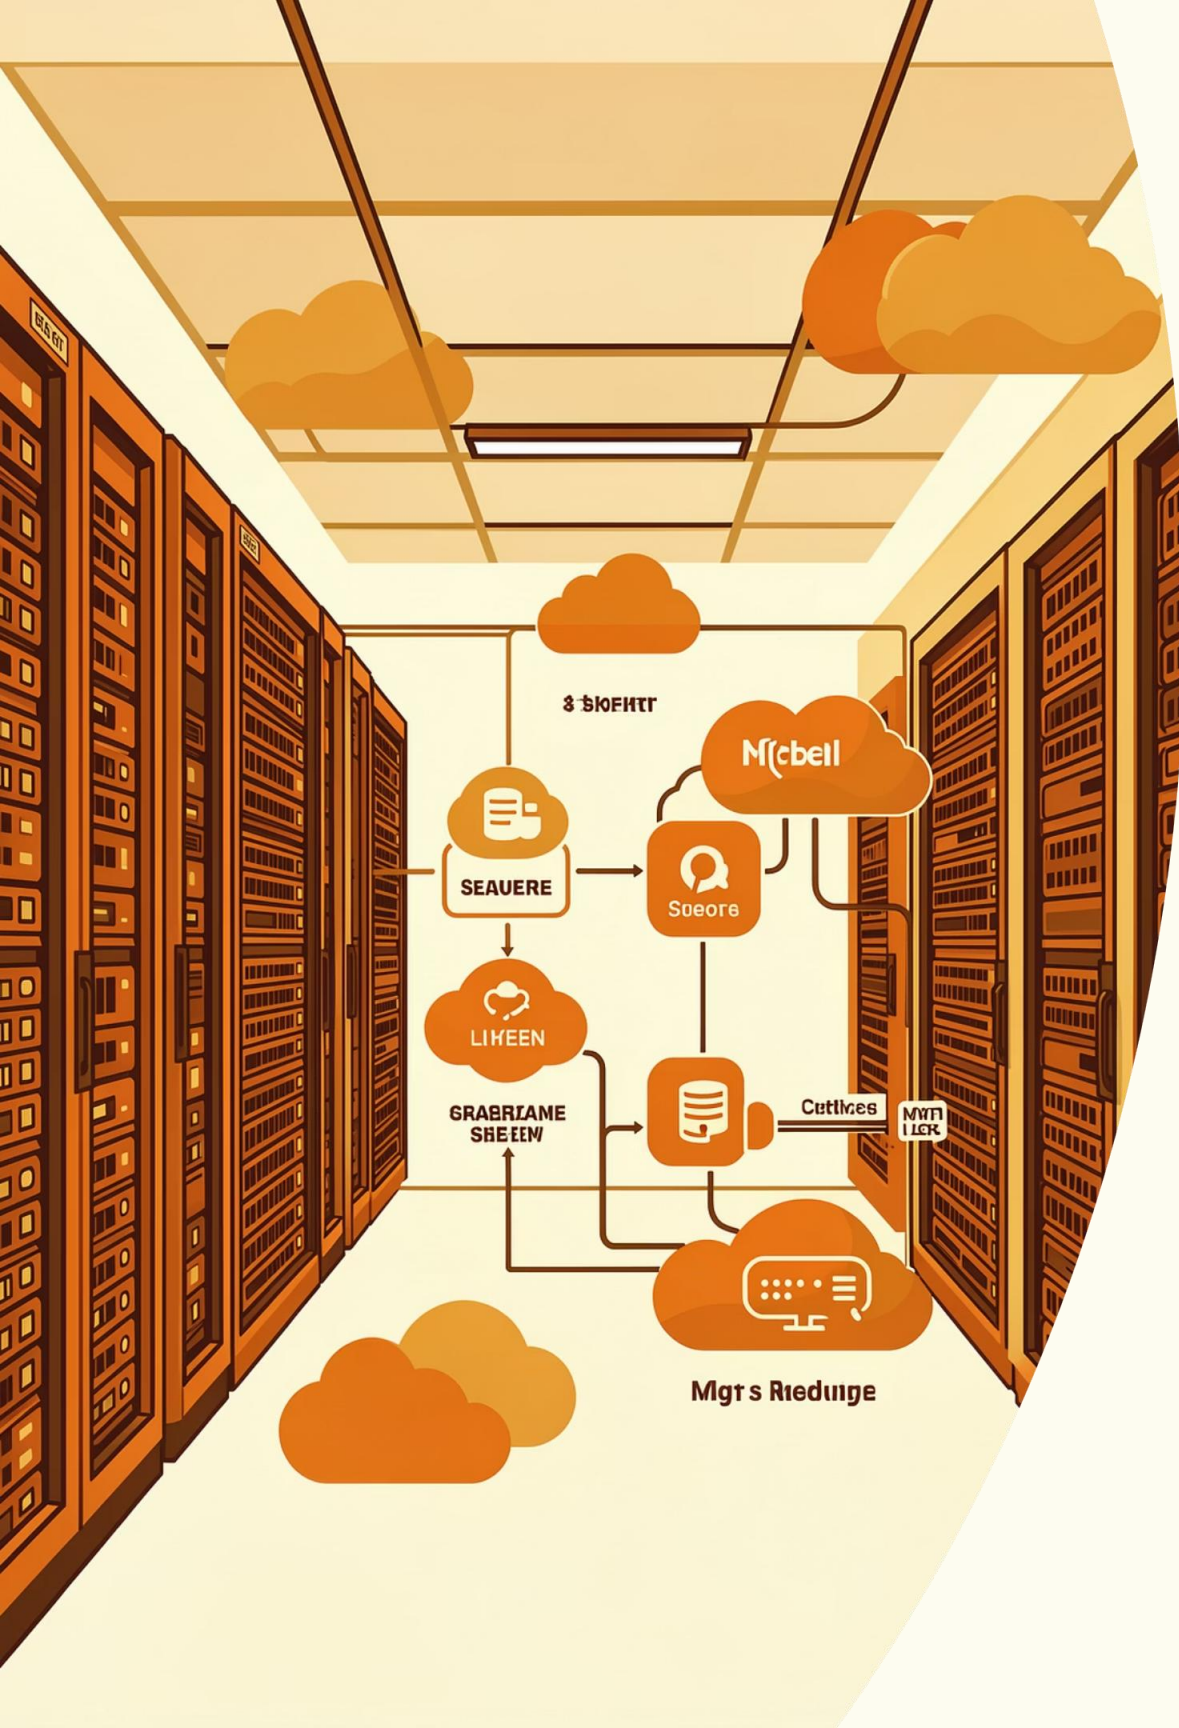

## Pricing

Dynamic charges •  
Time-based rules

## Reports

Utilization,  
revenue, incidents

Integrates with sensors, payment gateway, and enforcement tools

# Backend Architecture

## Database

Firebase Firestore / Realtime Database — cloud-based real-time parking data

## Auth

Firebase Authentication — secure logins

### NOTE:

The system uses Firebase services directly, eliminating the need for a separate API layer and simplifying the backend architecture.

Detect Occupancy

Send to Gateway

Update Database

Push to App

End-to-end real-time pipeline. Low-latency updates via WebSocket.

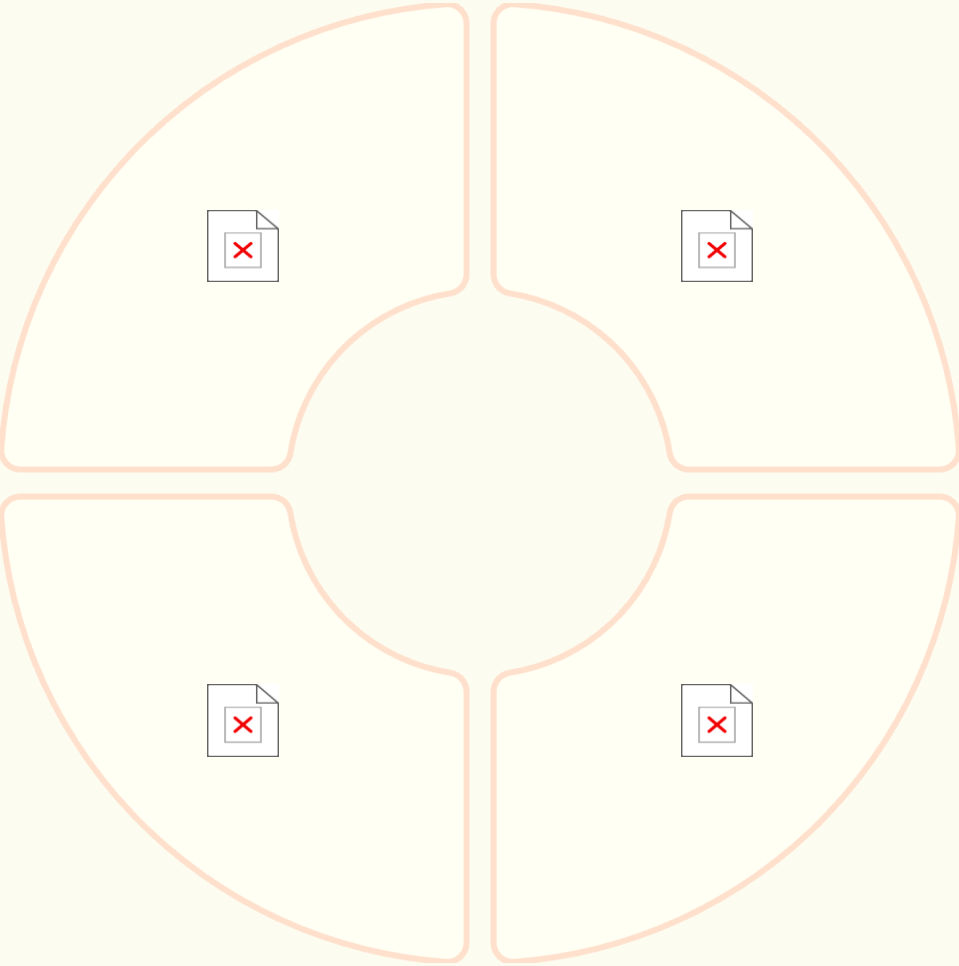

# Key Features — At a Glance

Real-time Availability

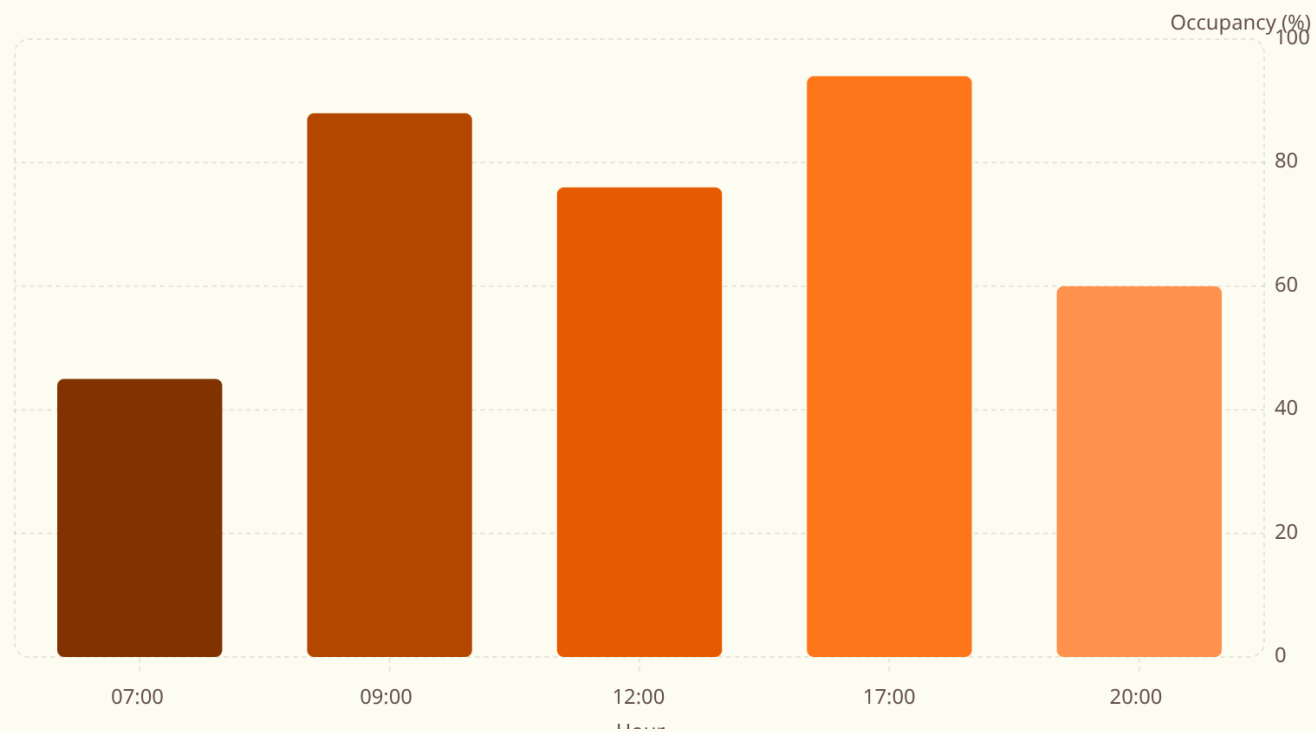

Online Booking

Utilization Analytics

Guidance & Routing

Designed for city-scale deployment and operator control

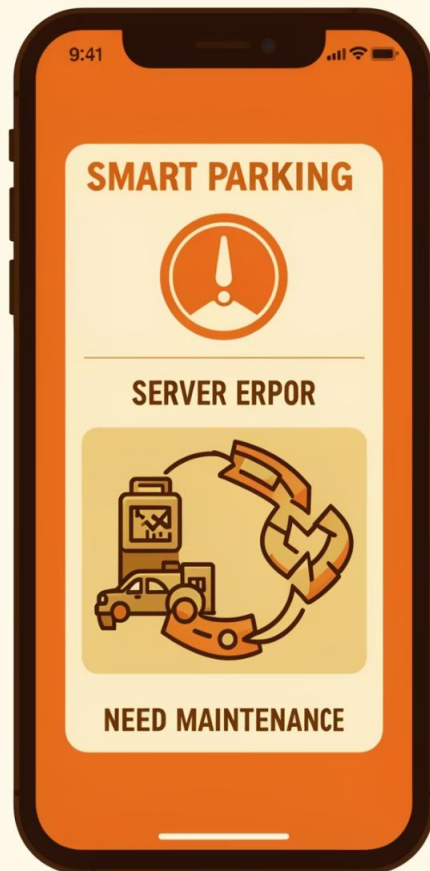

# Utilization Pattern — Peak Hours

Data informs dynamic pricing, enforcement scheduling, and transit planning. Target: smooth peak congestion.

# Benefits for Cities & Users

- Saves time & fuel — lower emissions
- Reduces cruising traffic and congestion
- Improves space utilization and revenue
- Digital records → fewer manual errors

# Risks & Limitations

## Connectivity

Requires stable internet / cellular coverage

## Costs

Installation & ongoing maintenance

## Reliability & Security

Redundancy, backups, and data protection needed

Mitigations: offline caching, SLA-backed connectivity, encrypted data storage

# Next Steps & Recommendation

## Pilot

Small district deployment • 3 months

## Scale

Phase rollout • integrate enforcement

## Optimize

Dynamic pricing • analytics-driven policy

- Proposal: pilot with 200 sensors, operator dashboard, and public app. Budget estimate and timeline available on request.
